achemso — Support for submissions to American Chemical Society journals*

Joseph Wright[†]

Released 2022-11-25

Abstract

The achemso bundle provides a LATEX class file and BibTEX style file in accordance with the requirements of the American Chemical Society (ACS). The files can be used for any documents, but have been carefully designed and tested to be suitable for submission to ACS journals.

The bundle also includes the natmove package. This package is loaded by achemso, and provides automatic moving of superscript citations after punctuation.

1 Introduction

Support for BibT_EX bibliography following the requirements of the American Chemical Society (ACS), along with a package to make these easy to have been

^{*}This file describes version v3.13f, last revised 2022-11-25.

[†]E-mail: joseph.wright@morningstar2.co.uk

available since version one of achemso. The re-write from version 1 to version 2 made a number of improvements to the package, and also added a number of new features. However, neither version one nor version two of the package was targeted directly at use for submissions to ACS journals. This new release of achemso addresses this issue.

The bundle consists of four parts. The first is a LATEX $2_{\mathcal{E}}$ class, intended for use in submissions. It is based on the standard article class, but makes various changes to facilitate ease of use. The second part is the LATEX package. The package contains the parts of the bundle which are appropriate for use with other document classes. Thirdly, two BibTeX style files are included. These are used by both the class and the package, but can be used directly if desired. Finally, an example document is included; this is intended to act a potential template for submission, and illustrates the use of the class file.

2 Installation

The package is supplied in dtx format and as a pre-extracted zip file, achemso.tds.zip. The later is most convenient for most users: simply unzip this in your local texmf directory and run texhash to update the database of file locations. If you want to unpack the dtx yourself, running tex achemso.dtx will extract the package whereas latex achemso.dtx will extract it and also typeset the documentation.

Typesetting the documentation requires a number of packages in addition to those needed to use the package. This is mainly because of the number of demonstration items included in the text. To compile the documentation without error, you will need the packages:

- array
- booktabs
- hypdoc
- listings
- Imodern
- mathpazo
- microtype

3 Requirements

The achemso class requires the following packages:

- caption
- float
- · geometry

¹For example, when writing a thesis.

- natbib
- setspace
- xkeyval

These are normally present in the current major TFX distributions, but are also available from The Comprehensive TeX Archive Network.

The class file

The class file has been designed for use in submitting journals to the ACS. It uses all of the modifications described here (those in the package as well as those in the class). The accompanying example manuscript can be used as a template for the correct use of the class file. It is intended to act as a model for submission.

When submitting communications to J. Am. Chem. Soc., the class will automatically lay the document out in the publication style. This allows the author to judge the length of text submitted more accurately. Changing the manuscript in the demonstration document to communication will illustrate the effect.

Class options 4.1

journal (env.) The class supports a limited number of options, which are specifically-targeted at submission. The class uses the keyval system for options, in the form key=value. The most important option is journal. This is an identifier for the target journal: from https://pubs.acs.org/, the identifier is the part of the URL after https://pubs.acs.org/journal/, e.g. for J. Org. Chem. it would be joceah. If an unknown journal is specified, the package will fall-back on the journal=jacsat

The second option is the manuscript option. This specifies the type of paper in the manuscript. The values here are article, note, communication, review, letter and perspective. The valid values will depend on the value of journal. The manuscript option determines whether sections and an abstract are valid. The value suppinfo is also available for supporting information.

The achemso class can produce drafts in two layout styles. The standard setting for the layout option is traditional, which produces a double-spaced single column manuscript. The alternative setting twocolumn will use single spacing and print the text in two columns. The second option is obviously more compact. If the journal requires a particular style this option may be ignored.

It may be desirable to omit e-mail addresses from the front page of a manuscript. The printing of e-mail addresses can be disabled using the email option, which takes Boolean values only. The default is to print e-mail addresses. Notice that phone and fax numbers are only printed if e-mail addresses are

Other options are provided by the package, but when used with the class these are silently ignored. If you need to override the settings chosen by the class, include the settings *after* the \documentclass line using \setkeys:

\documentclass[journal = jacsat]{achemso} \setkeys{acs}{articletitle = false}

3

manuscript (env.)

layout (env.)

email (env.)

4.2 Manuscript meta-data

\author Inspired by REVTEX, the achemso class alters the method for adding author \affiliation information to the manuscript. Each author should be given as a separate \author \alsoaffiliation command. These should be followed by an \affiliation, which applies to the \altaffiliation preceding authors. The \affiliation macro takes an optional argument, for a \email short version of the affiliation.² At least one author should be followed by an \email macro, containing contact details. All authors with an e-mail address are automatically marked with a star. The example manuscript demonstrates the use of all of these macros. Notice that \alsoaffiliation is used when one (or more) authors work at multiple institutions, while \altaffiliation is intended for previous addresses (or other notes). Only \affiliation applies to multiple authors: both \alsoaffiliation and \altaffiliation are set on a per author

```
\author{Author Person}
\author{Second Bloke}
\email{second.bloke@some.place}
\affiliation[University of Sometown]
  {University of Somewhere, Sometown, USA}
\altaffiliation
  {Previous address: Minute University, Nowhereville, USA}
\author{Indus Trialguy}
\email{i.trialguy@sponsor.co}
\affiliation[SponsoCo]
  {Research Department, SponsorCo, BigCity, USA}
\alsoaffiliation{University of Somewhere, Sometown, USA}
```

Repeated entries for \affiliation and \alsoaffiliation will result in only one address being printed in the address list and footnotes. \altaffiliation entries only produce a single footnote, and can therefore be used for entries such as

```
\author{First Coworker}
\altaffiliation{Contributed equally to this work}
\author{Second Coworker}
\altaffiliation{Contributed equally to this work}
```

if required.

The class will recognise the optional information \fax and \phone, which will \fax \phone be printed along with the lead authors e-mail address. Note that this information is only used for authors who have an e-mail address supplied.

```
\author{Second Bloke}
\email{second.bloke@some.place}
\phone{+xxx (0)yyy zzzzzz}
\fax{+xxx (0)yyy wwwwww}}
\affiliation[University of Sometown]
  {University of Somewhere, Sometown, USA}
```

The method used for setting the meta-data means that the normal \and and \thanks \thanks macros are not appropriate in the pkgachemso class. Both produce a warning if used.

The \title macro is extended to accept an optional argument. This is \title

²This will usually be the university or company name.

intended for a shortened version of the journal title suitable for running headers. Some journals require that authors supply this data: if it is needed then it will be printed in the appropriate place.

```
\title[Short running title]
  {Long title which would not fit in running headers}
```

The meta-data items should be given in the preamble to the LATEX file, and no \maketitle macro is required in the document body. This is all handled by the class file directly. At least one author, affiliation and e-mail address must be specified.

4.3 Floats

scheme (env.) The class defines three new floating environments: scheme, chart and graph. chart (env.) These can be used as expected to include graphical content. The placement of graph (env.) these new floats and the standard table and figure floats is altered to be "here" if possible. The contents of all floats is automatically horizontally centred on the page.

Section headers 4.4

\SectionNumbersOff Some journals have no section numbering by default. This can be set up in \SectionNumbersOn the appropriate configuration file, but it may be that individual users need to change the decision. The macros \SectionNumbersOff and \SectionNumbersOn are therefore available: these should be given in the preamble.

\SectionsOff

More radically, the entire availability of sections can be turned on and of. This \SectionsOn is functionality is available to the user via the \SectionsOn and \SectionsOff \AbstractOff macros, which again are preamble-only. Similar functions are available for the \AbstractOn abstract: \AbstractOff and \AbstractOn.

Special sections

acknowledgement (env.) The sections for acknowledgements and supporting information have dedicated suppinfo (env.) environments available. These ensure that the section headings are generated, and that the text is sized corrected when using creating a Communication.

```
\begin{acknowledgement}
 The authors thank A.N.~Other.
\end{acknowledgement}
\begin{suppinfo}
 Full characterization data for all new compounds.
\end{suppinfo}
```

tocentry (env.)

For generating an entry for the graphical table of content, required by some journals, the environment tocentry is available. This prints its content in an appropriately sized box on a separate page. In contrast to the rest of the manuscript, this section is intended to be "print ready" in appearance.

```
\begin{tocentry}
  \includegraphics{toc-entry-graphic}
 Some text to explain the graphic.
\end{tocentry}
```

4.6 Miscellaneous commands

\latin

The command \latin is provided by the class to format Latin phrases such as "et al." Most ACS journals do not make these italic, but some (for example ACS Nano) do. By providing a command, the formatting is left flexible.

\doi

The bibliography style prints any DOI values as the argument to the command \doi. The default definition will allow printing of special characters but does not create hyperlinks. A more sophisticated version of the command may be set up if hyperref is loaded, for example

```
\begin{tocentry}
  \newcommand{\doi}[1]{\href{http://dx.doi.org/#1}{\nolinkurl{#1}}}
\end{tocentry}
```

5 The package file

The achemso package is independent of the class file, and contains parts of the bundle useful outside of submission to the ACS.

5.1 Package options

As with the class options, the package uses the key-value method for option set up. These are used to control the output of citations and bibliographic data. The same options are used when creating journal configurations for the class: this is a task most users will not need to undertake!

super (env.)

The super option affects the handling of superscript reference markers. The option switches this behaviour on and off (and takes Boolean values: super=true and super=false are valid).

articletitle (env.)

The articletitle option is a Boolean, and sets whether the title of a paper referenced appears in the bibliography. The default is articletitle=true.

doi (env.)

The boolean doi option is provided to allow a DOI (Digital Object Identifier) to be included for bibliography entries even where other identification such as page numbers is available. The standard setting is false: setting it to true will cause DOI numbers to be printed if available.

chaptertitle (env.)

The boolean chaptertitle option is provided to allow flexibility for the inclusion of chapter titles for book and related entries. The standard setting is false: setting it to true will cause chapter titles to be included.

etalmode (env.)
maxauthors (env.)

Many journals require that long lists of authors are shortened using 'et al.' in the references section. The behaviour of the BibTEX styles in this regard is controlled by two options, etalmode and maxauthors. There are two possible ways to shorten a long list of authors. Some journals require that only the first author is given, followed by 'et al.': for this behaviour, set etalmode=firstonly:

```
Jones, A.N. et al.
```

On the other hand, some journals request that the list of authors is truncated after n authors. This is set up by the etalmode=truncate option:

```
Jones, A.N.; Bloggs, F.; Nobacon, D. et al.
```

In both cases, the maximum number of authors permitted before introducing 'et al.' is governed by the maxauthors option. This option recognises the sentinel value 0, which indicates that no shortening should occur at all.

biblabel (env.)

Redefining the formatting of the numbers used in the bibliography usually requires modifying internal LATEX macros. The biblabel option makes these changes more accessible: valid values are plain (use the number only), brackets (surround the number in brackets) and period or fullstop (follow the number by a full stop/period).

biochem (env.)

Most ACS journals use the same bibliography style, with the only variation biochemistry (env.) being the inclusion of article titles. However, a small number of journals use a rather different style; the journal Biochemistry is probably the most prominent. The biochemistry or biochem option uses the style of Biochemistry for the bibliography, rather than the normal ACS style.

Bibliography notes

\bibnote achemso provides the \bibnote macro. This is intended for addition of notes \bibnotemark to the bibliography (references). The macro accepts a single argument, which is \bibnotetext transferred to the bibliography by BIBTEX. In analogy to \footnote, the macros \bibnotemark and \bibnotetext are available for dividing up the marker for a note from the text.

> Some text \bibnote{This note text will be in the bibliography}. Some text. 1

The functionality for bibnotes in achemso is based on that in the notes2bib package. The notes2bib package can be loaded with the achemso package, and no clash will occur. With the class file, notes2bib will be ignored if requested, to prevent issues on submission to the ACS.

The BibT_EX style files 6

achemso is supplied with two style files, achemso.bst and biochem.bst. The direct use of these without the achemso package file is not recommended, but is possible. The style files can be loaded in the usual way, with a \bibliographystyle command. The natbib package must be loaded by the LATEX file concerned, if the achemso package is not in use.

The style files are designed to use the moiteplus package if it is available, but to work even if is not. When mciteplus is present, it is possible to automatically produce references of the form

(5) (a) Arduengo, A. J., III; Dias, H. V. R.; Harlow, R. L.; Kline, M. J. Am. *Chem. Soc.* **1992**, 114, 5530–5534; (b) Appelhans, L. N.; Zuccaccia, D.; Kovacevic, A.; Chianese, A. R.; Miecznikowski, J. R.; Macchioni, A.; Clot, E.; Eisenstein, O.; Crabtree, R. H. J. Am. Chem. Soc. 2005, 127, 16299–16311; (c) Arduengo, A. J., III; Gamper, S. F.; Calabrese, J. C.; Davidson, F. J. Am. Chem. Soc. 1994, 116, 4391–4394.

as demonstrated in the example document. When mciteplus is not present, this functionality is not available but the style files will work normally.

The $BibT_EX$ style files implement the bibliographic style specified by the ACS in *The ACS Style Guide*. ² By default, article titles are not included in output using the achemso.bst file, but are with the biochem.bst file.

The style used by the ACS does not differentiate between BIBT_EX book, inbook, collection and incollection entries. As a result, the appearance of these entry types depends on the fields available. Named subdivisions of a book (for example, chapters where each has a named author) should be given in the title field, with the title of the book itself in the booktitle field. The chapter field should be used for a chapter number, and is printed as part of the pagination.

One frequently asked question is why some people see an empty first item in their bibliography when using the achemso package or class. This is usually because they have downloaded the LATEX files and done a local installation without also updating the BIBTEX style. The two must be from the same version of achemso: they are designed to work together.

7 The natmove package

The natmove package does only one job. It brings the ability to move punctuation after citations, using code borrowed from the cite package. Both the achemso class and package load natmove automatically.

```
Some text \cite{Coghill2006} some more text.\\
Some text ending a sentence \cite{Coghill2006}.
Some text² some more text.
Some text ending a sentence.²
```

This is deactivated for other citation types.

```
Some text \citeyear{Coghill2006}.\\
Some text \citeauthor{Coghill2006}.\\
Some text \citenum{Coghill2006}.
Some text 2006.
Some text Coghill and Garson.
Some text 2.
```

The package does nothing if the super option has not been given to natbib. This means that the source can be written without needing to decide where citations will to appear, with the super option for natbib controlling the result.

\natmovechars

One user macro is provided: \natmovechars. This contains the characters which are moved before superscript punctuation. The default contents is ,;:. and can be set using \renewcommand*:

```
\renewcommand*{\natmovechars}{.}
Some text^2, more text.^2
Some text \cite{Coghill2006},
more text \cite{Coghill2006}.
```

8 Implementation

A lot of the work done by the package is also needed by the class. Loading the package and the class makes load-order awkward. Instead, the two parts are done in one place. Sandwiching the common code are two slices of dedicated

material for the class and the package. Some of this is needed "early", before the common material, whilst the rest is "late".

8.1 Early class-only code

So that there is no confusion, the base class is loaded early.

```
1 (*class)
2 \ProvidesClass{achemso}
3 [2022-11-25 v3.13f Submission to ACS journals]
4 \LoadClass[12pt,letter]{article}
```

\acs@warning The code for a warning is created so that it works for the package too.

```
_5 \ensuremath{\mbox{\mbox{\mbox{$\sim$}}}\ 6 \ensuremath{\mbox{\mbox{\mbox{$\sim$}}}\ }
```

8.2 Early package-only code

The package and the class should not both be loaded, as the two use the same internal macro names. On the other hand, if the class is not in use a reminder is printed to use it if possible.

```
<sub>7</sub> ⟨*package⟩
8 \ProvidesPackage{achemso}
9 [2022-11-25 v3.13f Support for ACS journals]
10 \@ifclassloaded{achemso}{%
11 \PackageInfo{achemso}{%
      You have already loaded the 'achemso' class:\MessageBreak
12
      loading the package will abort%
13
   }%
14
   \endinput
15
16 }{%
   \PackageInfo{achemso}{%
17
      When writing a submission to an ACS journal, please\MessageBreak
18
      use the achemso document class%
19
20
21 }
```

\acs@warning The code for a warning is created so that it works for the class too.

```
22 \newcommand*\acs@warning{\PackageWarning{achemso}}  
23 \langle /package\rangle
```

8.3 Common code

\acs@ifundefined A non-expandable test for defined macros: does not add to the hash table.

```
24 \ *package | class \\
25 \newcommand*\acs@ifundefined[1] {%
26 \begingroup\expandafter\expandafter\expandafter\endgroup
27 \expandafter\ifx\csname #1\endcsname\relax
28 \expandafter\@firstoftwo
29 \else
30 \expandafter\@secondoftwo
31 \fi
32 \}
```

The first stage needed is to read the package options given. Although xkeyval was perhaps not the best choice, changing this now would be rather risky.

33 \RequirePackage{xkeyval}

\acs@keyval@bool A support macro for making Boolean options: the xkeyval version is only available in newer releases.

```
34 \newcommand*\acs@keyval@bool[2]{%
     \acs@ifundefined{acs@#1#2}{%
35
36
       \acs@warning{Unknown option '#2' for key #1}%
37
       \ensuremath{\mbox{\tt Qnameuse}\{acs@\#1\#2\}\%}
38
    }%
39
40 }
```

\ifacs@abbreviations These are all very trivial definitions: to avoid issues with older versions of xkeyval \ifacs@articletitle each definition is done directly.

```
\ifacs@keywords
   \ifacs@super
```

```
\ifacs@biochem 41 \newif\ifacs@abbreviations
\verb|\ifacs@chaptertitle||_{42} \le $4^{\infty}$ ifacs@articletitle||
         \ifacs@doi 43 \newif\ifacs@biochem
       \ifacs@email 44 \newif\ifacs@doi
    \ifacs@hyperref 45 \newif\ifacs@chaptertitle
                      46 \newif\ifacs@email
                      47 \newif\ifacs@hyperref
                      48 \newif\ifacs@keywords
                      49 \newif\ifacs@super
                      50 \define@key{acs}{abbreviations}[true]{%
                          \acs@keyval@bool{abbreviations}{#1}%
                      52 }
                      53 \define@key{acs}{articletitle}[true]{%
                      _{54} \acs@keyval@bool{articletitle}{#1}%
                      55 }
                      56 \define@key{acs}{biochem}[true]{%
                          \acs@keyval@bool{biochem}{#1}%
                      57
                      58 }
                      59 \define@key{acs}{doi}[true]{%
                      60 \acs@keyval@bool{doi}{#1}%
                      61 }
                      62 \define@key{acs}{chaptertitle}[true]{%
                           \acs@keyval@bool{chaptertitle}{#1}%
                      64 }
                      65 \define@key{acs}{email}[true]{%
                           \acs@keyval@bool{email}{#1}%
                      66
                      67 }
                      68 \define@key{acs}{hyperref}[true]{%
                           \acs@keyval@bool{hyperref}{#1}%
                      69
                      70 }
                      71 \define@key{acs}{keywords}[true]{%
                          \acs@keyval@bool{keywords}{#1}%
                      73 }
                      _{74} \ensuremath{\mbox{\sc open}} [true] {\%}
                           \acs@keyval@bool{super}{#1}%
                      76 }
                      77 \define@key{acs}{usetitle}[true]{%
```

```
\acs@keyval@bool{articletitle}{#1}%
                 <sub>79</sub> }
   \acs@journal Trivial again: done without using xkeyval for the same reasons as before.
   \acs@layout
                 80 \newcommand*\acs@journal{jacsat}
\acs@manuscript
                 81 \newcommand*\acs@layout{traditional}
                 82 \newcommand*\acs@manuscript{article}
\acs@maxauthors
                 83 \newcommand*\acs@maxauthors{15}
                 84 \define@key{acs}{journal}{%
                     \def\acs@journal{#1}%
                 85
                 86 }
                 87 \define@key{acs}{layout}{%
                     \def\acs@layout{#1}%
                 89 }
                 90 \define@key{acs}{manuscript}{%
                 91 \def\acs@manuscript{#1}%
                 92 }
                 93 \define@key{acs}{maxauthors}{%
                     95 }
```

\ifacs@etal@truncate The setup for the etalmode option is quite simple: just look for the appropriate \acs@etal@firstonly macros.

\acs@etal@truncate

```
96 \newif\ifacs@etal@truncate
97 \define@key{acs}{etalmode}{%
    \acs@ifundefined{acs@etal@#1}{%
       \acs@warning{%
99
         Unknown value '#1' for\MessageBreak etalmode option%
101
    ጉና%
102
       \@nameuse{acs@etal@#1}%
103
    ጉ%
104
105 }
106 \newcommand*\acs@etal@firstonly{\acs@etal@truncatefalse}
107 \newcommand*\acs@etal@truncate{\acs@etal@truncatetrue}
```

\acs@activate@biblabel The biochemistry option is an alias for biochem. The biblabel option is a choice, which is implemented using a csname search. The group here prevents hash table pollution, whilst the xkeyval method is avoided as it is more complex than it is worth!

```
108 \define@key{acs}{biochemistry}{%
    \setkeys{acs}{biochem = #1}%
109
110 }
111 \define@key{acs}{biblabel}{%
    \acs@ifundefined{acs@biblabel@#1}{%
112
       \acs@warning{%
113
         Unknown value '#1' for\MessageBreak biblabel option%
114
115
116
    }{%
       \acs@activate@biblabel{\@nameuse{acs@biblabel@#1}}%
117
    }%
118
119 }
120 \newcommand*\acs@activate@biblabel{}

                        }%
                   289
                   290 }
\acs@bibliography The \bibliography macro is now patched so that everything works correctly.
    \bibliography
                   291 \AtBeginDocument{%
                        \let\acs@bibliography\bibliography
                        \def\bibliography#1{%
                   293
                          \acs@bibliography{acs-\jobname,#1}%
                   294
                        }%
                   295
                   296 }
```

\latin The journal *ACS Nano* formats Latin phrases differently from every other ACS journal: we provide a \latin command to cover this.

```
297 \AtBeginDocument{
```

```
298 \providecommand{\latin}[1]{#1} 299 } 300 \langle \text{/package} \mid \text{class} \rangle
```

8.4 Late class-only code

Most of the power of the class is now created. First, a few options are reset so that any given by the user are effectively ignored.

```
301 (*class)
302 \text{setkeys{acs}}
303 abbreviations = false,
304 articletitle = true,
_{305} biblabel = brackets,
                 = false,
306 biochem
                  = false,
307 doi
308 etalmode = firstonly,
309 keywords = false,
310 maxauthors
                  = 15,
311
    super
                   = true
312 }
```

When using the class, notes2bib is always emulated. Other standard support packages can now be loaded.

```
313 \acs@niib@create
314 \RequirePackage[margin=2.54cm] {geometry}
315 \RequirePackage{
316 caption,
317 float,
318 graphicx,
319 setspace,
320 url
321 }
322 \ifacs@hyperref
323 \expandafter\RequirePackage
324\else
325 \expandafter\@gobble
326\fi
    {hyperref}
328 \AtBeginDocument{\doublespacing}
```

\title For the meta-data, the REVTEX bundle provides a good model for the commands \Otitle to give the author. \gdef is used here to avoid any odd grouping issues.

\acs@author@cnt achemso tracks the number authors, affiliations and alternative affiliations. \acs@affil@cnt 337 \newcount\acs@author@cnt

\acs@affil@cnt \acs@affil@alt@cnt

```
338 \newcount\acs@affil@cnt
339 \newcount\acs@affil@alt@cnt
```

\acs@affil@marker@cnt

\acs@footnote@cnt Two counts for getting affiliation footnotes correct.

1@marker@cnt 340 \newcount\acs@footnote@cnt
341 \newcount\acs@affil@marker@cnt

362

363 364 } }%

\author The author macro stores the current author details and sets the affiliation of the author to the current one. Everything is \global so that there is no possibility of begin trapped inside a group. The affiliation counter is always one behind, and so it is locally incremented to keep the logic of the code clear elsewhere.

```
342 \def\author#1{%
              \global\advance\acs@author@cnt\@ne\relax
         343

1417
     \fi
1418 }
1419 \RequirePackage{natmove}
```

The mciteplus package allows the construction of lists of references with sub-letters. However, it might not be available, and so it is only loaded if available: the .bst files should work either way. There is also a patch to get cross-references correct with the modified \ref macro used here. The reason for ensuring that \@mciteNatbibCiteCmdList is defined is that it allows for the case where people prevent mciteplus being loaded using \ver@mciteplus.sty.

```
1420 \IfFileExists{mciteplus.sty}{%
1421 \RequirePackage{mciteplus}
1422 \providecommand*{\@mciteNatbibCiteCmdList}{}%
1423 \edef\@tempa{\noexpand\in@{citenum}{\@mciteNatbibCiteCmdList}}%
1424 \@tempa
1425 \iffin@
1426 \else
```

```
\edef\@mciteNatbibCiteCmdList{\@mciteNatbibCiteCmdList,citenum}%
1427
     \fi
1428
1429 (*!package)
     \def\@mciteSubRef[##1]##2{\plainref{\@mcitereflabelprefix:##1:##2}}
1431 (/!package)
1432 }{}
```

\acs@bibstyle The next step is to sort out bibliography formatting. With both the package and the class, the bibliography style is determined without user intervention. The style is stored as it may need to be altered later.

```
1433 \newcommand*\acs@bibstyle{achemso}
1434 \ifacs@biochem
     \def\acs@bibstyle{biochem}
     \bibliographystyle{biochem}
1437 \else
1438 \bibliographystyle{achemso}
1439 \fi
```

\acs@bibliographystyle The original \bibliographystyle macro is now disabled: the underlying com-\bibliographystyle mand is repeated otherwise problems cop up with chapterbib.

```
1440 \newcommand*\acs@bibliographystyle{}
1441 \let\acs@bibliographystyle\bibliographystyle
1442 \def\bibliographystyle#1{%
     \acs@warning{\string\bibliographystyle\space ignored}%
     \expandafter\acs@bibliographystyle\expandafter{\acs@bibstyle}%
1445 }
1446 (/class | package)
```

Late package-only code

The notes2bib code may or may not be activated.

```
1447 (*package)
_{1448}\AtBeginDocument\{\%
1449 \@ifpackageloaded{notes2bib}{}{%
        \acs@niib@create
1450
1451 }%
1452 }
1453 (/package)
```

Moving citations with natbib

The code for moving citations is created as a separate package, as the code needed is the same in both cases.

```
1454 (*natmove)
1455 \ProvidesPackage{natmove}
1456 [2010/01/15 v1.1a Automatic citation moving with natbib]
1457 \RequirePackage{natbib}
```

\nmv@ifmtarg To keep down dependence on other packages, the very short code block from \nmv@xifmtarg ifmtarg is copied here with an internal name.

```
1458 \newcommand*\nmv@ifmtarg{}
1459 \newcommand*\nmv@xifmtarg{}
```

```
\catcode'\Q 3\relax
                      1461

```

\nmv@natbib@detect So that natbib options can be set without worrying about load order, natmove doesn't require natbib. So a test is needed to see if it is actually loaded. This is done as a macro so that the effect can be changed by achemso.

```
1542 \newcommand*\nmv@natbib@detect{%
     \@ifpackageloaded{natbib}{%
1543
        \ifNAT@super
1544
          \expandafter\nmv@activate
1545
1546
        \fi
     }{%
1547
        \PackageInfo{natmove}{%
1548
          The natbib package is not loaded.\MessageBreak
1549
          Loading natmove will do nothing
1550
        }%
1551
     }%
1552
1553 }
1554 \AtBeginDocument{\nmv@natbib@detect}
```

\natmovechars A user macro is needed for moving characters.

```
1555 \newcommand*\natmovechars{.,;:}
_{1556} \langle / natmove\rangle
```

8.8 The configuration files

The configuration files for different journals are not very complex. Keeping everything separate simply helps with maintenance.

```
